

Premium Wealth Management Platform — AI Master Prompt

Build a premium production-grade Wealth & Portfolio Management web platform inspired by:

- eToro (social investing UX)
- TradingView (charts & market experience)
- Zerodha Console (analytics & reporting)
- INDmoney (wealth dashboard UX)
- Groww (simplicity & onboarding)
- Coinbase (modern asset presentation)

The platform should feel like a world-class fintech product used by modern investors, RIAs, PMS firms, family offices, and wealth advisors.

Core Objective

Create a scalable, modular, API-first wealth platform where users can:

- Track all financial assets in one place
- Manage portfolios and transactions
- View real-time wealth analytics
- Import holdings from brokers/RTAs
- Monitor investments visually
- Generate reports/statements
- Receive alerts and insights
- Scale to multi-user and advisor-level workflows

The product should prioritize:

- Premium UX
 - Visual polish
 - Smooth interactions
 - Mobile-first thinking
 - High-performance dashboards
 - Institutional-grade reliability
-

Supported Asset Classes

Support:

- Stocks
- Mutual Funds
- ETFs

- Bonds
 - Fixed Deposits
 - Gold/SGB
 - Insurance
 - Loans/Liabilities
 - Real Estate
 - Cash/Bank Accounts
 - Crypto-ready architecture
 - Alternative investments
-

Tech Stack

Frontend:

- React
- TypeScript
- Next.js
- TailwindCSS
- Zustand/Redux
- AG Grid
- ECharts/Recharts
- TradingView Charts
- WebSocket-ready frontend

Architecture:

- Modular architecture
 - API-first design
 - Event-driven system
 - Reusable components
 - Multi-tenant scalable structure
 - Plugin/extensible architecture
 - Production-grade folder structure
-

UI / UX Design Expectations

Design should feel:

- Premium fintech
- Modern
- Visual-first
- Consumer-friendly
- Highly polished
- Smooth and interactive
- Minimal yet information-rich

Prefer:

- Beautiful portfolio cards
- Elegant watchlists
- Rich data visualization
- Interactive charts
- Smooth transitions
- Modern onboarding flows
- Widget-based dashboards
- Resizable/dockable layouts
- Elegant empty/loading states
- Glassmorphism/minimal aesthetics

Avoid:

- Generic admin templates
- Plain CRUD dashboards
- Table-only layouts
- Outdated enterprise UI
- Overly cluttered screens

Focus heavily on:

- UX quality
- Micro-interactions
- Visual polish
- Responsive behavior
- Mobile-friendly layouts

Main Modules

1. Authentication

Features:

- Login/signup
- OTP/2FA
- RBAC
- Multi-user/team support
- Session management
- Secure onboarding flow

2. Main Dashboard

Create a premium wealth dashboard with:

Widgets:

- Net worth
- Portfolio growth
- Asset allocation
- XIRR/CAGR
- Cash flow
- Upcoming maturities
- Dividend/interest income
- Goal tracking
- Risk exposure
- Daily/monthly/yearly returns

Charts:

- Allocation pie charts
- Heatmaps
- Growth curves
- Sector exposure
- Historical performance
- Income analytics

Dashboard should feel similar to:

- eToro + INDmoney + modern neo-banking apps.
-

3. Portfolio Management

Support all asset classes.

Features:

- Add/edit/delete holdings
- Holdings overview
- Transaction history
- Family/account grouping
- Portfolio tagging
- Multi-account support
- Search/filter/sort
- Bulk actions
- Watchlists

Use modern asset cards and premium portfolio layouts.

4. Transaction Management

Features:

- Buy/sell entries
- SIP/STP/SWP tracking
- Dividend tracking
- Interest tracking
- Corporate actions
- Expense tracking
- Audit logs

Import Support:

- Excel/CSV upload
 - PDF statement parsing
 - Broker import workflows
-

5. Integrations

Support integrations with:

- AMFI
- CAMS
- KFinTech
- Zerodha
- Groww
- Upstox
- Fyers
- Banks APIs
- Market data providers

Features:

- Auto-sync holdings
- NAV updates
- Real-time pricing
- Portfolio reconciliation
- Integration status monitoring

Integration layer must be modular/extensible.

6. Analytics & Reporting

Analytics:

- XIRR/CAGR
- Asset allocation

- Risk analysis
- Drawdown analytics
- Tax PnL
- Sector exposure
- Goal analytics
- Benchmark comparison

Reports:

- Portfolio statements
- Capital gains
- Tax reports
- Cash flow reports
- Client statements

Support:

- PDF export
- Excel export
- Scheduled reports
- Shareable reports

Design should resemble premium fintech analytics systems.

7. Goals & Financial Planning

Features:

- Goal tracking
- Retirement planning
- SIP calculators
- Future value projections
- Wealth forecasting
- Cash flow planning

Include modern interactive calculators.

8. Notifications & Alerts

Channels:

- Email
- WhatsApp
- Push notifications

Alerts:

- SIP due
- Maturity alerts

- Allocation drift
- Portfolio drawdown alerts
- Dividend alerts
- Market events

Create modern notification center UI.

9. Admin Panel

Features:

- User management
 - Integration monitoring
 - Datafeed monitoring
 - Logs/errors
 - Subscription plans
 - Feature flags
 - System analytics
-

Architecture Expectations

Generate:

- Full frontend architecture
- Reusable components
- Theme system
- Typed interfaces
- State management
- API service layer
- WebSocket-ready structure
- Modular folder structure
- Production-grade frontend

Code should be:

- Clean
 - Scalable
 - Maintainable
 - Extensible
 - Enterprise-ready
-

Future-Ready Requirements

Architecture must support future features like:

- AI wealth advisor
 - Robo advisory
 - Social/copy investing
 - AI recommendations
 - Mobile apps
 - Family office workflows
 - Client onboarding/KYC
 - Document vault
 - Multi-advisor/RIA mode
 - Marketplace ecosystem
-

Final Output Expectations

Generate:

- Complete frontend UI
- Premium fintech design system
- Responsive layouts
- Wealth dashboards
- Portfolio workflows
- Analytics screens
- Charts/tables
- Reusable components
- Mock data
- State management setup
- Production-ready architecture

The final product should feel like: "eToro meets TradingView meets INDmoney with institutional analytics quality."
