

## Trading Engine Platform UI - Compact Master Prompt

Build a premium production-grade web UI for a scalable Algo Trading Platform inspired by Modern day algo trading system + TradingView + institutional trading terminals.

### Tech Stack:

- React + TypeScript + Next.js
- TailwindCSS
- Zustand/Redux
- React Flow
- AG Grid
- TradingView Charts/ECharts
- WebSocket-ready architecture

### Design Requirements:

- Premium Light theme
- Institutional trading UI
- Responsive
- Modular architecture
- Reusable components
- Real-time updates
- Widget-based dashboard
- Dockable/resizable layouts
- Fast and scalable frontend
- Production-ready code quality

### Main Modules:

#### 1. Auth

- Login/signup
- OTP/2FA
- RBAC support

#### 2. Dashboard

- Portfolio overview
- Running strategies
- Live PnL
- Risk widgets
- Broker status
- Trade feed
- Equity charts

### 3. Strategy Builder (Core)

- Left panel: indicators/components
- Center: workflow canvas
- Right: settings/config
- Support:
  - indicators
  - conditions
  - SL/Target
  - trailing SL
  - option strategies
  - time conditions
  - nested logic
  - variables/custom expressions
- Zoom/pan
- Undo/redo
- Autosave
- Extensible node/block architecture

### 4. Strategy Management

- Save/edit/clone
- Tags/folders
- Versioning
- Search/filter

### 5. Backtesting

- Historical testing UI
- Equity curve
- Analytics
- Trade logs
- Drawdown metrics

### 6. Live Execution

- Deploy/pause/stop
- Live logs
- Health monitoring
- WebSocket updates

### 7. Broker Management

Support:

- Zerodha
- Kotak Neo
- Upstox

- Flattrade
- Shoonya

#### Features:

- OAuth/API login
- Token/session management
- Multi-account support

#### 8. Trades & Positions

- Orders
- Positions
- MTM/PnL
- Execution logs
- Greeks support

#### 9. Risk Management

- Daily loss limits
- Exposure control
- Kill switch
- RMS alerts

#### 10. Analytics

- PnL analytics
- Drawdown
- Heatmaps
- Strategy comparison
- Export reports

#### 11. Notifications

- Telegram
- WhatsApp
- Email
- Push alerts

#### 12. Admin Panel

- Users
- Logs
- Broker monitoring
- API monitoring
- Feature flags

#### Architecture Expectations:

- API-first

- Event-driven
- Multi-user scalable
- Plugin/extensible design
- Future-ready for:
  - AI strategy builder
  - marketplace/copy trading
  - mobile apps
  - custom indicators/plugins

Generate:

- Full frontend architecture
- Complete UI screens
- Reusable components
- Responsive layouts
- Mock data
- State management
- Theme system
- Production-ready folder structure

Need premium institutional trading experience. Elegant yet simple.
